***Election/Restrictions***

1. The election with traverse of the invention claimed in claim 1 and its dependent claims has been noted. The examiner agrees with Applicant's argument that claim 1 is generic, and in view of the reasons for allowance, the non-elected claims have been rejoined.

***Allowable Subject Matter***

2. Claims 1, 7-11, and 21-26 allowed.

3. The following is an examiner's statement of reasons for allowance: prior art does not teach in combination with the other limitations of the independent claims fueling a gas turbine with an inert gas/methane gas blend containing below 40% methane, the inert gas and the methane gas both originating from natural gas reserves having from 40% to 80% methane by volume. Note that according to prior art practice as taught by Mehra 4623371 col. 8, ll. 40-54, separated inert gases were expanded directly through a turbine in order to recover shaft work, but not participating in a gas-turbine combustion cycle. Regarding Figure 13 in GE Power Systems publication GER-3567H, showing the feasibility of burning in a gas turbine 75%-N<sub>2</sub> or -CO<sub>2</sub> with 25% CH<sub>4</sub>, the publication date is 10/2000, later than the application date of the parent of the present application (12/13/1999).

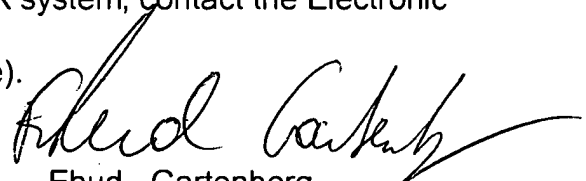

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
